(54) Title: METHOD AND APPARATUS FOR MANUFACTURING DATA INDEXING

(57) Abstract: A method, apparatus, and a system for generating an index for storing data. A pattern associated with a first set of data is determined. The first set of data is stored. A determination is made as to whether the pattern associated with a second set of data corresponds to the pattern associated with the first set of data. An index associated with the first set of data is correlated to the second set of data in response to determining that the pattern associated with the second set of data corresponds to the pattern associated with the first set of data.
