

Abstract

A text acquisition module (101) of a monitoring system (1) acquires text related to a state of a device (20) that is a
5 monitoring target in a service. A time-series data acquisition module (102) acquires, based on the text, time-series data related to the state. A processing execution module (103) executes, based on the time-series data, processing relating to an anomaly in the service.
