

ABSTRACT

Embodiments of this application disclose a virtual item control method and apparatus, a terminal, and a storage medium, and belong to the field of computer technologies. The method includes: displaying a plurality of item icons after a press operation on a throw button is detected; controlling, when the press operation moves to the target item icon and a duration reaches a target duration, a virtual object to hold a target virtual item corresponding to the target item icon; controlling, in response to a movement of the press operation, the virtual object to aim at a target position; and controlling, in response to a release of the press operation, the virtual object to throw the target virtual item to the target position. The display, selection, aiming, and throwing of the virtual item can be completed only when a user is required to perform one continuous and coherent press operation, thereby simplifying the operation procedure and improving the throwing efficiency.
