

ABSTRACT

Location of an article containing a search term in a hosted document

5 According to a first aspect of the invention, there is provided a method of
locating an article containing a search term in a hosted document, the method
comprising: processing the search term against all searchable content within the
hosted document to locate an article containing the search term, the article being
one of a plurality of articles within the hosted document; and visually demarcating
10 the article to distinguish the article from a remainder of the hosted document.
