

**APPARATUS FOR CONNECTING PREFINISHED PREFABRICATED VOLUMETRIC
CONSTRUCTION UNITS**

ABSTRACT

5

An apparatus for coupling prefinished prefabricated volumetric construction (PPVC) units, including first and second parallel inserts laterally displaced by a bridging member, the first and second inserts being coupleable to respective upper sections of columns of first adjacent PPVC units to thereby couple the units together, wherein the

10 first and second inserts each include a plurality of vanes extending radially from a central axis towards respective inner peripheral sections of respective columns.
