

**Movable Protection Device for Military
Vehicles with a Distance-Active Protection System**

5

Abstract

The invention relates to a protective device for a military vehicle (100) for protecting against repercussions (R) of a distance-active protection system (200) on the vehicle (100). According to the invention, a protective shield (2) can be secured, in particular pivotably, to the vehicle (100) by means of a fastening device (3).
