A SYSTEM FOR INTERCEPTING MULTIMEDIA DOCUMENTS

The system for intercepting multimedia documents disseminated from a network comprises an interception module (110) for intercepting and processing information packets, which module comprises a packet interception module (101), a packet header analyzer module (102), a module (104) for processing packets recognized as forming part of a connection that has already been set up in order to access a storage container where the data present in each received packet is saved, and a module (103) for creating an automaton for processing received packets belonging to a new connection. The system further comprises a module for analyzing the content of the data stored in the containers, for recognizing the protocol used, for analyzing the content transported by said protocol, and for reconstituting the intercepted documents.
