SYSTEMS AND METHODS FOR MATCHING DRIVERS WITH PASSENGERS, WHEREIN PASSENGERS SPECIFY THE PRICE TO BE PAID FOR A RIDE BEFORE THE RIDE COMMENCES

ABSTRACT

A computer-implemented method for requesting a ride with a specified fare set by a passenger, the method being performed in connection with a computerized system comprising at least a processor and a memory, the method involving: receiving a ride request from a passenger with a specified fare set by a passenger; transmitting a ride request to the ride requests feed of a driver; selecting a driver in response to the ride request from the passenger with a specified fare by receiving driver requests for an order, determining driver device location, determining driver rating, the driver selection based on his/her location and rating; and providing driver selection results to a passenger, the selected driver and other drivers.
