

ABSTRACT

According to embodiments of the present disclosure, there is provided a method, system, apparatus, electronic device, storage medium and program product for data exchange. The method described herein comprises: obtaining original data to be exchanged by a target application between a first platform and a second platform; obtaining normalized data corresponding to a type of the original data by processing the original data based on the type; determining a satisfaction of a data exchange constraint from the normalized data. In this way, the embodiments of the present disclosure may simplify and promote the determination of the data exchange constraint and accelerate the data exchange process.
