

ABSTRACT

MODULAR FURNITURE SYSTEM WITH WIRE MANAGEMENT

5 The present disclosure relates to modular and reconfigurable architectural assemblies
such as modular walls and modular furniture, including modular and reconfigurable desk
systems, with features and components that provide wire management functionality. A
modular desk system includes a horizontal work surface and a lower vertical section
extending vertically downward and/or upward from the work surface. At least a portion of
10 the lower vertical section houses one or more resource trays having power and data
receptacles for user wires to plug into. An access component such as a cover encloses the
resource tray to provide a functional and aesthetically pleasing assembly while allowing
management and organization of user wires and/or supply wires.
