(54) Title: ENHANCED COLOUR CONVERSION

Figure 1A

Figure 1B

(57) Abstract: A method of forming a light emitting structure, the light emitting structure comprising: a light emitting region configured to emit light having a primary peak wavelength; a partially reflective region; a reflective region; and colour conversion region, wherein the light emitting region is positioned at least partially between the partially reflective layer and the reflective layer and the partially reflective region is positioned at least partially between the colour conversion region and the light emitting region, wherein the partially reflective region is configured to reflect light of a predetermined range of wavelengths and allow light outside the predetermined range of wavelengths to pass through the partially reflective region, wherein the primary peak wavelength is outside the predetermined range of wavelengths.
