AUDIO CODING METHOD AND APPARATUS

ABSTRACT

Disclosed are an audio coding method and an apparatus. An encoding method includes: obtaining a first bitstream, where the first bitstream is obtained based on a first audio signal (701); obtaining side information, where the side information is obtained based on a second audio signal (702); obtaining a second bitstream based on the side information (703); and transmitting a bitstream, where the bitstream includes the first bitstream and the second bitstream (704).
