(54) Title: AMBULANCE

Fig. 1

(57) Abstract: Ambulance having a chassis (210) that can move by itself and a self-supporting superstructure (100) including the patient compartment (110). A coupling structure (300) driven by an electric actuator is provided between the top (231) of the rear part (230) of the chassis (210) and the bottom (101) of the superstructure (100), and having two states. In fixed state the coupling structure (300) is arranged within the space with a given vertical height (h) between the top (231) of the rear part (230) of the chassis (210) and the bottom (101) of the superstructure (100). In fixed state the superstructure (100) is secured to the chassis (210), while in unfixed state the superstructure (100) can be lifted freely from the chassis (210) in a vertical direction with an external device.
