

ABSTRACT

The present application provides a prop interaction method and apparatus in a virtual scene, an electronic device, a computer readable storage medium, and a computer program product. The method comprises: displaying at least some of areas in a virtual scene on a human-computer interaction interface, wherein the at least some of areas comprise a virtual object; and in response to at least two virtual props having an interaction function appearing in the at least some of areas, displaying that a first virtual prop in the at least two virtual props is in a selected state, and displaying at least one interaction control corresponding to the first virtual prop, wherein the interaction control is configured to be triggered to execute the interaction function corresponding to the interaction control, and the interaction function is used for the virtual object to interact with the first virtual prop.
