

ABSTRACT

Embodiments of the disclosure relate to a method, an apparatus, a device, and a storage medium for setting a cover. The method proposed here includes: providing, in a setting interface of a media content, a plurality of entries for setting a plurality of covers of the media content, the plurality of entry being associated with a plurality of cover proportions; presenting an editing interface in response to a selection of a first entry among the plurality of entry, the first entry corresponding to a first cover proportion; generating a first cover corresponding to the first cover proportion based on an editing operation in the editing interface; and generating a second cover corresponding to a second cover proportion among the plurality of cover proportions based at least in part on the generated first cover. In this way, the embodiments of the disclosure are capable of supporting producing a plurality of covers with different proportions for the media content.
