

ABSTRACT

A pharmaceutical composition and a use thereof, specifically relating to (a) a compound of general formula (I) or a pharmaceutically acceptable salt, isomer or crystal form thereof, and (b) a novel endocrine therapy drug, variables in the general formula each being as defined in the description. It has been found by means of research that the compound of general formula (I) or the pharmaceutically acceptable salt, isomer or crystal form thereof, and the novel endocrine therapy drug, have a synergistic effect in combined treatment of prostate cancer.
