(54) Title: A DATA CENTRE SYSTEM AND METHOD OF CONSTRUCTION

Figure 3

(57) Abstract: The invention provides a data centre including a building structure comprising an internal space for containing equipment modules and a lifting device adapted to lift, lower and move horizontally equipment modules within the internal space of the building structure. In embodiments, the invention provides a power section of a data centre wherein the equipment modules are comprised of power equipment modules. The invention enables data centre equipment modules including the standby generators and power supply and distribution systems to be prefabricated off-site and supplied in a skid mounted form so that they can be transported to site, unloaded and quickly installed into the building structure.
