

ABSTRACT OF THE DISCLOSURE**COOKING DEVICE FOR FOOD VENDING MACHINE**

Provided is a cooking device for a food vending machine. The cooking device is arranged in a food vending machine, for cooking food material supplied by the food vending machine, and is provided with a long groove body (10), a heating unit (20), and a moving mechanism (30). The long groove body (10) is in a linear shape, the heating unit (20) and the moving mechanism (30) are arranged in the long groove body (10), and the moving mechanism (30) can convey the food material from an entrance (101) of the long groove body (10) to an exit (102) thereof. With the present invention, raw food can be made into cooked food, the food vending machine can offer freshly cooked food, all spaces of the long groove body (10) can be effectively utilized, and it can be applied to different food materials and cooking methods. The moving mechanism (30) can move a plurality of containers containing food materials at the same time, so that the plurality of food materials can be heated simultaneously.
