MANAGEMENT SYSTEM

ABSTRACT

The object of the present invention is to provide a management system configured to help to electronically grasp a transaction of a gaming chip within a casino, in particular at a game table.

A management system (2000) is a management system at a game table (42) for performing a game using a gaming chip (70) including a built-in RFID tag (71). The game table (42) includes: a chip tray (421) configured to accommodate the gaming chip of a dealer; a bet area (422a-422e) on which the gaming chip (70) to be bet in the game is to be placed; a collection area (423a) and a payout area (423b) different from the bet area (422a-422e) and the chip tray (421); a collection reading antenna (5131) configured to read at the collection area (423a) the RFID tag (71) of the gaming chip (70) collected due to losing in the game; and a payout reading antenna (5132) configured to read at the payout area (423b) the RFID tag (71) of the gaming chip (70) to be paid out to a player who wins the game.
