DATA QUERY METHOD AND SYSTEM, AND STORAGE MEDIUM

# 说 明 书 摘 要

本说明书提供一种数据查询方法、系统及存储介质，包括：响应于数据查询请求，获得多个数据源的指标数据，其中，一个数据源的指标数据表征数据源在历史时段内的查询表现情况。基于多个数据源的指标数据，对多个数据源进行排序得到目标排序，并按照目标排序在多个数据源中的至少部分数据源中进行数据查询，以得到数据查询结果。

This specification provides a data query method and system, and a storage medium, including: obtaining indicator data of a plurality of data sources in response to a data query request, where indicator data of one data source represents query performance of the data source in a historical period; sorting the plurality of data sources based on the indicator data of the plurality of data sources, to obtain a target order; and performing a data query in at least some of the plurality of data sources based on the target order, to obtain a data query result.
