(54) Title: A SENSOR AND A SENSOR TAPE

Figure 1

(57) Abstract: The invention is a sensor (10) comprising at least a first layer having a first set of signal paths (110), an electronic circuit (115) being configured to detect a first impact of signal paths (110) based on signals read on signal paths (110) and determine a location of said first impact based on signals read characterized in that comprising at least a secondary sensing means (200) for detecting a second impact thereof provided between at least two of the signal paths (110) or on at least one of the signal paths (110), and said electronic circuit (115) is further configured to generate a status signal based on signals received from the signal paths (110) where said secondary sensing means (200) is connected.
