

ABSTRACT OF THE DISCLOSURE

ELECTRICAL CONNECTOR WITH IMPROVED BOARD MOUNTING PEG

5 An electrical connector (10) is adapted for mounting to a surface (44) of a printed circuit board (38) having a mounting hole (40) leading to a remote surface (36) of the board. The connector includes a dielectric housing (12) having terminals (16) mounted therein and including a board-mounting face (20). At least one mounting peg (22) projects from the board-mounting face for
10 insertion into the mounting hole (40) in the printed circuit board (38). The mounting peg is bifurcated to define a pair of legs (24a,24b) separated by an axial slit (26). The legs have arcuate board-mounting surfaces (28) on the outside thereof. The arcuate surface of at least
15 one of the legs (24a) is flattened (30) to define a pair of circumferentially spaced end portions (32).
