

DEVICE CONNECTION METHOD FOR PLANT

ABSTRACT

A device connection method for a plant that is capable of shortening a plant construction period by enabling commissioning to be started immediately after installation of various devices in construction of the plant is provided. A second installation process for installing a second device is completed when or after a first installation process for installing a first device is completed, a laying process for laying a cable is completed before or when the second installation process is completed, and a connection process for connecting the cable to the second device is performed when or after the second installation process is completed.
