DESCRIPTIVE ABSTRACT

"Device and its process for automatically managing the flow of digital data from a host between a common interface and its associated modules"

SCM SCHNEIDER MICROSYSTEME - MICROSYSTEMES SCHNEIDER ENTWICKLUNGS UND VERTRIERS GMBH, SARL DEVELOPPEMENT ET VENTE

The invention has for its object a device automatically to manage the switching of the flow (1) of digital data from a host (3) to a common interface using at least two connectors for modules (A-B).

The invention uses means for automatically recognizing their module (A-B) once they are inserted in each connector and switching control means which interchange the movements of the flow (1) to the interior of the host (3) and the modules (A-B).

The invention is applicable particularly to digital television.
