ABSTRACT

Chemically Reinforced Glass Manufacture Method, Information Recording Medium Glass Substrate Manufacture Method, Information Recording Medium Manufacture Method, and Chemical Reinforcement Device

In order to prevent particles generated in the preparation of a chemically reinforcing molten salt from getting into an operation atmosphere for performing a chemical reinforcement, a chemical reinforcement tank 2 and a dissolution tank 10 for preparing the chemically reinforcing molten salt are separated from each other. In a typical embodiment, the chemical reinforcement tank is disposed in a clean room 35, and the dissolution tank 10 is disposed outside the clean room.
