CLAIMS

1. A nucleic acid sequence which encodes a protein according to SEQ ID No: 1.

2. A vector comprising the nucleic acid sequence of claim 1.

3. A protein obtained by expression of the nucleic acid sequence of claim 1 or the vector of claim 2 in a host cell.

4. The protein of claim 3, wherein the host cell is a prokaryotic host cell.

5. The protein of claim 3 or 4, wherein the host cell is E. coli.

6. A protein which is encoded by a nucleic acid sequence according to SEQ ID NO: 6.

7. A pharmaceutical composition comprising the protein of claim 3 or 4.

8. A composition of matter comprising a protein according to SEQ ID No: 2 and/or 3.

9. The composition of matter of claim 8 further comprising a protein according to SEQ ID No. 4 and/or 5.

10. The composition of matter according to claim 8 or 9, wherein the amount of the protein according to SEQ ID No: 2 exceeds that of the protein according to SEQ ID No: 3.

11. The composition of matter according to any one of claims 8 to 10, wherein the amount of the proteins according to SEQ ID No: 2 and 3 exceeds that of the protein according to SEQ ID No: 4 and/or 5.

12. A host cell comprising the nucleic acid sequence of claim 1 or the vector of claim 2.

13. The host cell of claim 12, which is a prokaryotic or eukaryotic host cell.

14. The prokaryotic host cell of claim 13, which is E. coli, preferably E. coli BL21.

15. A method of manufacturing a pharmaceutical composition comprising culturing the host cell of any one of claims 12 to 14 under conditions allowing the expression of the encoded protein, and recovering the obtained pharmaceutical composition.
