(54) **Title:** A PLASTIC INFILTRATION UNIT

FIG. 7

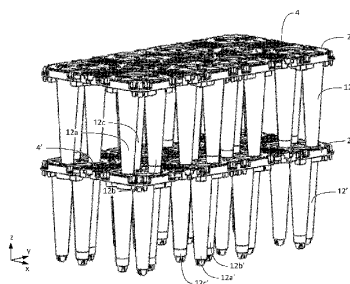

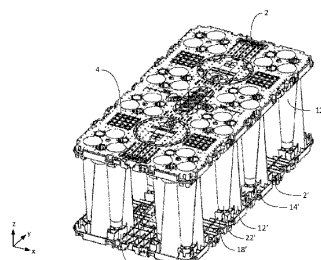

FIG. 8

(57) **Abstract:** A plastic infiltration unit comprising: a deck (4) extending in a plane, the deck having a first surface and a second surface, wherein the first surface is arranged to face in a first direction and the second surface is arranged to face in a second direction, wherein the second direction is different to the first direction, at least two support structures (12, 12') which are each connected to the deck at the second surface and extend from the second surface, wherein each of the at least two support structures include a proximal portion located in a proximal zone with respect to the deck and a distal portion located in a distal zone with respect to the deck, and a reception location (18) located in the proximal zone, wherein another identical plastic infiltration unit comprising at least two another support structures and the plastic infiltration unit can be placed in an interconnected condition, wherein, in the interconnected condition, the at least two another support structures contact the at least two reception locations, so that a load exerted on the plastic infiltration unit is transferred to the identical plastic infiltration unit.
