

ABSTRACT**A Control System and an Interface Therefor**

- 5 An interface is disclosed that is locatable between a server and at least one operational system for a clean room. The interface has a memory configured to store a copy of control settings from a control signal sent from the server to the at least one operational system; and a processor configured to send a control signal to the at least one operational system based on the stored copy of the control settings, if a predetermined
- 10 condition is met.
