ABSTRACT

The present disclosure relates to the technical field of communications, and in particular to a channel state information (CSI) reporting method and apparatus, and a storage medium, which are used for implementing CSI reporting corresponding to a plurality of channel state information reference signal (CSI-RS) resources. The method comprises: in response to a network device configuring Ntrp CSI-RS resources for a terminal, determining N target CSI-RS resources from among the Ntrp CSI-RS resources, where Ntrp and N are positive integers, and $1 \leq N \leq Ntrp$; and sending CSI corresponding to the N target CSI-RS resources to the network device.
