(54) Title: THREE-DIMENSIONAL INSERT CONSTRUCTION

(57) Abstract

A three-dimensional insert for use in a handling system comprising a sheet of cardstock or the like defined by first and second ends (20e) and first and second sides (20s), a coating (22) applied to at least a portion of the top surface of the cardstock, and an overwrap (26) material bonded to the coating, preferably proximate to the first and second sides. This structure enables a three-dimensional object (10p, 12p) to be placed within the overwrap material without risk of movement to the peripheral sides thereby eliminating the possibility of interference with the apparatus for handling the insert.
