

**DIGITAL DISPLAY DRIVEN BY ANALOG INTERFACE
WITH REDUCED NOISE**

ABSTRACT

An analog interface apparatus for driving a digital display unit, said apparatus comprising: a colour palette means for storing colour signals for driving said digital display unit; and a look up table means (22) for storing colour signals for driving said digital display unit and for supplying said colour signals to said colour palette means (2), said look up table (22) including means for interrupting write operations to said colour palette means (2) by receiving as inputs colour signals of said write operations and providing as outputs colour signals having a resolution matching that of said digital display unit.
