

ABSTRACT

An email forwarding method and apparatus, an electronic device, and a storage medium. Said method comprises: in response to detection of an email forwarding operation, determining an email group to be forwarded and a target object, the target object comprising
5 at least one of a target instant messaging (IM) group and IM users; and forwarding the email group to the target object, so as to display the email group in the target object. The email group to be forwarded and the target object are determined, and the email group is forwarded to the target object, so as to display the email group in the target object, as the email group
10 can contain multiple emails, multiple emails can be simultaneously forwarded, thereby having simple and convenient operations, increasing the efficiency of email forwarding, and satisfying the working requirements of a user.
