(54) Title: **DEVICE AND CONTAINER FOR IRRIGATION BY CAPILLARITY**

(57) Abstract: It comprises means for providing irrigation liquid to the soil at a very low flow rate, said means being connected to a conduct (4) or irrigation container (5), characterised in that the means for providing irrigation liquid to the soil comprise a set of fibres (2) of synthetic tissue provided in a support (1) fixed to the conduct (4) or irrigation container. Thus, a device is obtained that provides constant and dosed irrigation liquid, regardless of the supply pressures.
