

ABSTRACT

An object is to provide a method for producing a resin composition capable of obtaining a film including a filler and excellent in appearance, and a resin composition.

5 A method for producing a resin composition according to the present invention is a method for producing a resin composition including: an olefin-based polymer; an inorganic filler; and a lubricant, in which the olefin-based polymer is at least one polymer selected from the group consisting of a propylene-based polymer, and an ethylene-based polymer having a melt flow rate of 0.5 g / 10 minutes or more measured
10 at a temperature of 190 °C and a load of 2.16 kg. The method includes: a step (1) of mixing the inorganic filler and a lubricant; a step (2) of mixing a mixture obtained in the step (1) and the olefin-based polymer; and a step (3) of kneading a mixture obtained in the step (2).
