

PLASMA ADDRESSED LIQUID CRYSTAL DISPLAY DEVICEABSTRACT OF THE DISCLOSURE

5

To provide a plasma addressed liquid crystal display device which can enhance the bonding strength between the dielectric sheet and the plasma substrate glass, a frit seal is provided at the outside of the barrier ribs, and dummy barrier ribs and a frit seal are sequentially provided on the outside of the frit seal. The frit seal has a greater width than that of the frit seal and has a role as a reinforcing member. The dielectric sheet and a plasma substrate glass are provided so as to sandwich the barrier ribs. A liquid crystal layer is provided on a surface side of the dielectric sheet.
