

Abstract

MODIFIED ALKYLPHENOL-ALDEHYDE RESINS, THEIR USE AS ADDITIVES
IMPROVING THE LOW TEMPERATURE PROPERTIES OF MOTOR FUELS AND
LIQUID HYDROCARBON FUELS

5

The present invention relates to novel modified alkylphenol-aldehyde resins with one or more alkylamines, having preferably at least one primary amine type group as well as their use for improving the flow properties of motor fuels and hydrocarbon fuels, such as in particular jet fuel, gas oil, fuel oil domestic, heavy fuel oil.
