(54) Title: BUS INTERFACE SYSTEM AND METHOD

(57) Abstract

A system and method for reconfiguring a peripheral device (54) connected by a computer bus (60) and port to a host (52) from a first generic configuration to a second manufacturer specific configuration is provided in which the configuration of a peripheral device may be electronically reset. A peripheral interface device (76) for a standardized computer peripheral device bus and port is also provided in which a physical disconnection and reconnection of the peripheral device is emulated to reconfigure the bus and port for a particular peripheral device.
