

Abstract

The invention relates to a piece of upholstered furniture according to the invention, to the basic structure thereof and to a method of producing the same.

The object of the invention is to provide a novel design concept for a piece of upholstered furniture and thus to achieve possible designs which are more varied and, at the same time, to bring about a simplified, recyclable element-assembly method.

This object is achieved in that the piece of upholstered furniture is constructed from a basic structure and is covered in order to produce the desired shape, the sitting comfort of the piece of upholstered furniture being predetermined by a lining of the basic structure, irrespective of the covering.
