

Abstract

A method and apparatus for extending a page tag and a computer storage medium are provided to implement interaction between a page tag and an operating system function, and improve user experiences. The method includes: parsing a page; determining whether the page comprises an identifiable comment tag; parsing the comment tag and obtaining an application function of a page tag defined by the comment tag, when the page comprises the identifiable comment tag; executing the application function of the page tag; and displaying a result of executing the application function of the page tag on the page. The examples are mainly used in a procedure of extending the page tag.
