(54) Title: METHOD, DEVICE, TERMINAL, AND SERVER FOR VERIFYING SECURITY OF SERVICE OPERATION

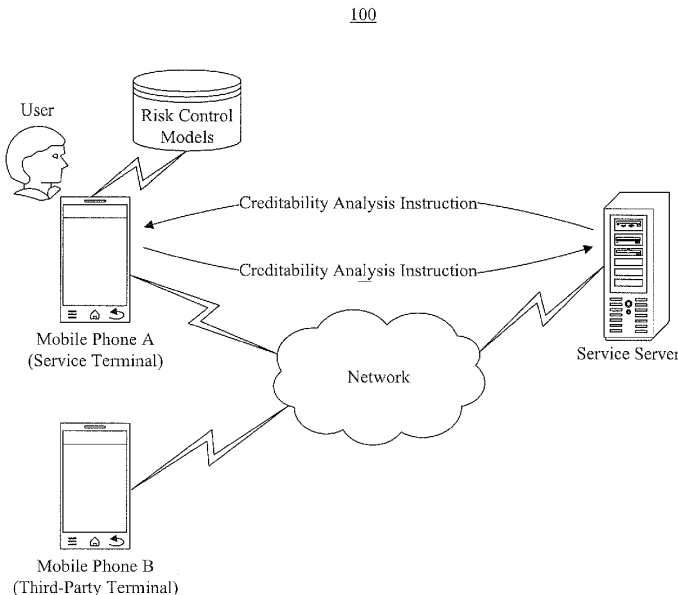

FIG. 1

(57) Abstract: A method for verifying a security of a service operation is provided. The method includes receiving, by a service terminal, a credibility analysis instruction of the service operation, where the credibility analysis instruction is sent by a service server. The method may further include obtaining, by the service terminal, a credibility analysis result of the service operation based on the credibility analysis instruction and one or more risk control models pre-stored in the service terminal, and sending the credibility analysis result to the service server for determining the security of the service operation.
