METHOD AND APPARATUS FOR THE PROVISION OF DOWNLOADABLE CONTENT TRANSACTIONS

ABSTRACT

This present invention relates to an online platform that allows users to register as buyer and/or sellers where the buyer can post a question and set a price he/she is willing to pay for and the seller can post a solution in the form of downloadable content to sell. This present invention encompasses various mechanisms that ease the buying and selling experience for the buyers and sellers because it intelligently provides the necessary information for the buyer and seller to make a more informed decision. One such features include several sellers revealing their partial solutions to the prospective buyer and only upon selection and confirmation of a purchase of solution from a particular seller would the buyer be given a full solution.
