

SUPPORTER

Abstract

[Problem to be Solved]

To provide a finger supporter capable of stabilizing hand joints of a wearer and reducing a load on any one finger from among five fingers.

[Solution]

The finger supporter includes: a first anchor portion 2 that is formed at an upper end 10a of a tubular fabric and causes the tubular fabric to be fastened to a forearm wrist portion of a wearer; a second anchor portion 3 that is formed to continue two points of a circling portion on the other end side of the tubular fabric and forms the circling portion into two opening portions 12a and 12b with different sizes; and a first support portion 4 that couples the second anchor portion 3 and the first anchor portion 2 and supports any one finger inserted into the smaller opening portion 12a from among five fingers.
