

ABSTRACT

This disclosure relates to a video processing method, a video processing apparatus, and a computer-readable storage medium. The video processing method includes: receiving an original caption added for a video to be translated by a creator of the video; selecting a translator based on the original caption and a language used by a user on a social network; providing the selected translator with the video to be translated, and providing, in the video, the translator with an interactive interface for translating the original caption in the video; receiving a caption translation of the caption returned by the translator from the interactive page; and displaying, in the video, the caption translation passing assessment.
