

ABSTRACT**SYSTEM AND METHOD FOR REAL TIME REPORTING OF
SITE FOUNDATION INSTALLATION DATA**

The present invention includes a system and method for real time reporting of construction site data. Mobile devices can be used at construction sites to record and update data in real time. A Mobile Site Reporting System (MSR) is configured with a set of modules and a database that stores, standardizes and process construction data. The system can receive construction site data, process the data, prepare enterprise documents, make calculations, make strategic decisions, present construction site data and calculated results, prepare as-built data and diagrams, prepare purchase orders, prepare daily work reports, prepare claim reports and summarize construction activity.
