

[ABSTRACT]

The present invention aims to provide viral vector-producing cells with improved ability to produce viral vector, a production method thereof, a kit containing the same, a
5 method for selecting viral vector-producing cells, and the like. A viral vector-producing cell in which the expression of a protein derived from the viral vector-producing cell is regulated, specifically, the expression of the aforementioned protein is regulated as compared with that in the viral vector-
10 producing cells before regulation of the expression or HEK293 cells (Accession number ATCC CRL1573) shows an improved ability to produce viral vectors.
