(54) **Title:** A FEEDING DEVICE FOR FEEDING AN INFANT, A METHOD FOR DISCHARGING FLUID FROM AN INFANT FEEDING DEVICE, AND A KIT OF PARTS

(57) **Abstract:** A feeding device (1) for feeding an infant, comprising a first fluid receptacle (4), a second fluid receptacle (8), a teat (10), as well as a valve structure (24, 25, 28) for selectively providing a fluid communication between the fluid receptacles (4, 8) and the teat (10), the feeding device comprising a sensor (20) configured to detect use of the feeding device (1), and a controller (22) for controlling the valve structure (24, 25, 28) based on the detected use of the feeding device (1) by the sensor (20). The invention also provides a method for discharging fluid from an infant feeding device (1), the method including: -feeding a first fluid to a teat (10) of the feeding device (1) during a first feeding period; -a sensor (20) monitoring a use of the feeding device (1) during the first feeding period; and -feeding a second fluid to the teat (10) of the feeding device (1) during a second feeding period, the second feeding period starting in case a predetermined change of the use of the feeding device has been detected by the sensor (20).
