(54) Title: A MONORAIL BOGIE HAVING A TRACTION/PITCHING CONTROL ASSEMBLY

FIG. 3

(57) Abstract: A traction/pitching control assembly for attachment to a body portion of a monorail bogie. The monorail bogie is operative for supporting a monorail car over a monorail track that has a running surface and two side surfaces. The traction/pitching control assembly comprises a first traction link, a second traction link and a linking member that has a first end portion and a second end portion. The first traction link is attached to the first end portion of the linking member, and the second traction link is attached to the second end portion of the linking member. The traction/pitching assembly further comprises a third traction link and a cross link. The cross link joins the third traction link to the first traction link and the linking member. The first traction link and the second traction link are attached to one of the body portion of the monorail bogie and the monorail car, and the linking member is connected to the other one of the body portion of the monorail bogie and the monorail car.
