(54) Title: **LIQUID PUMP**

(57) Abstract: A liquid pump creates a fountain type of dispenser for a container. The liquid pump includes a top portion, an elongated body and a bottom portion. The bottom portion at least partially includes an electric motor that is designed to draw fluid into the bottom portion when the electric motor is activated. The bottom portion is fluidly connected to the elongated body and the elongated body is fluidly connected to the top portion such that fluid that is drawn into the bottom portion is designed to flow out of the bottom portion and into the elongated body and then out of the elongated body and into the top portion.
