(54) Title: DATABASE TABLE RECOVERY SYSTEM

(57) Abstract: A system and method for recovering a database table (200) that depends on a tablespace (206) receives a backup copy (202) of the tablespace (206) and reads log records (204) associated with the table (200). The system then applies the log records (204) to the backup copy (202) and builds new table data pages from the backup copy (202). Finally, the system scans (214) the new table data pages for records of the first table and updates the table from the records.
