(57) Abstract: Disclosed are a triple display device and a computer employing same. The triple display device of the present invention comprises a main display, a first auxiliary display, and a second auxiliary display. The main display has a first input port connected, via a first cable, to a first output port of a dual graphic card installed on a main board of a computer, to display status information of the program being run on the computer. The first auxiliary display has a second input port connected, via a second cable, to a second output port of the dual graphic card, to display data (for example, advertisement content or company intranet information) automatically executed on the computer and provided by a specific site connected via the Internet. The second auxiliary display has a USB video module which has a USB output port connected, via a third cable, to a USB output port of the main board, to display data being executed in the main board in accordance with the command inputted by a user. According to the present invention, an increased number of workspaces can be ensured without additional costs, and the first auxiliary display is employed to enable the dedicated display of specific information, and also to enable the constant display of advertisement content to achieve advertisement effects.
